

BroadData Reservationless Audio Conferencing

SITF Instructions

Secure International Toll-Free (SITF) is an audio conferencing feature on our platform in place to make certain your conference is as secure as possible. SITF combats against unauthorized use of international dial-in numbers we provide to you.

SITF is only applicable to a just a few International Toll-Free Dial-In numbers.

For an International Toll-Free Dial-In number with SITF, an extra authentication step is required to ensure callers using the International Toll-Free Service (ITFS) dial-in number are valid participants.

If an International Toll-Free Dial-In number for a particular country requires SITF, this will be noted on any number list we provide to you or that you see on our web site.

Instructions

You should provide the instructions below to any of your participants who will be utilizing an International Toll-Free Dial-In number that requires verification via SITF.

- 1 Dial your current ITFS number as you normally do.
- 2 Enter the Moderator's US toll or US toll-free dial-in number when prompted. (10 digits i.e., 8887679895 or 6788092374, etc.).
- 3 Enter your Conference Code when prompted.
- 4 Once verified, you will be connected to the conference.
